

CITEST™ *Mycoplasma pneumoniae* Rapid Tests For Early Diagnosis of *Mycoplasma pneumoniae*

Mycoplasma pneumoniae is a form of bacterial pneumonia caused by the *Mycoplasma pneumoniae*. *M. pneumoniae* is spread through respiratory droplet transmission.

M. pneumoniae most commonly causes upper respiratory tract infections, but can also cause pneumonia. Approximately 40% of community-acquired pneumonia (CAP) is due to *M. pneumoniae* infections, with children and elderly individuals being most susceptible.

Cases tend to occur more frequently during the summer and fall months when other respiratory pathogens are less prevalent.

The identification of the *M. pneumoniae* helps in deciding the right therapeutic regimen for treatment. *M. pneumoniae* Rapid Test is widely used as a screening test device for the diagnosis of *M. pneumoniae* disease.

Product Advantages

- ✓ **Ease of Use** One step of procedure
- ✓ **Fast Results** Results in 10-15 minutes

Accurate Results

Analytes	Sensitivity	Specificity	Accuracy
M. Pneumoniae IgM	98.2%	99.2%	98.9%

Convenient Procedure

- IMPM-402 (Test with WB/S/P specimen)
