

Gastroenterology

Rapid Test Range

- Viruses (particularly rotavirus) and the bacteria are the primary causes of gastroenteritis. In children, viruses are the cause in about 70% cases, bacteria are the cause in about 15% of cases. **Adenovirus, Rotavirus, Norovirus** and **Astrovirus** are the most common causes of viral gastroenteritis.
- Gastroenteritis is typically diagnosed clinically, based on a person's signs and symptoms. Determining the exact cause helps in better patient management as it can decide, whether an antibiotic would be required.
- Rapid and accurate diagnosis of gastroenteritis is helpful in establishing the etiology of gastroenteritis and related patient management.
